NOZZLE METER APPARATUS

RANGE OF EXPERIMENTS TO BE CARRIED OUT:

1. To Calculate the Nozzle meter coefficient of given Nozzle meter and compare with the reported value in literature.
2. To predict the flow rate by using average value of coefficient of Nozzle meter

TECHNICAL DESCRIPTION:

The experimental unit consist of Nozzle meter fixed in the pipe. a water sump tank with self-priming monoblock centrifugal pump. The flow of water can be controlled by a valve.. A measuring tank is provided for measurement of discharge of water through the Section. The Differential Pressure across the Nozzle meter is measured by using U tube Manometer.

This system is complete closed circuit type and easy to move due to wheels.
